SOP-INTAKE-TRIAGE-HITL-102: Intake Fields, Status Workflow, and HITL Close

Version 2.0 | Effective 2026-04-05 | Classification: Synthetic / Non-Clinical

1. Purpose

Document mandatory intake fields, allowed status transitions, and Human-in-the-Loop (HITL) close approval for the fictional NovaCure tracker so reviewers and the agent share one grounded source of truth.

2. Mandatory fields

Report type; product name; batch/lot LOT-#####; date received; reporter type; description. Suspected Adverse Event rows additionally require event description and event onset date — still without real PII.

3. Status machine

New → In Review (allowed). In Review → Closed (requires HITL approve-close). New → Closed (illegal). Closed is terminal for this prototype. Reject-close returns the case to In Review.

4. Roles

Operator: create intake, start review if permitted. Reviewer: triage and request close. Approver: approve or reject pending close and agent HITL interrupts. Admin: all of the above plus document ingest.

5. Audit expectations

Every create, status change, HITL decision, document upload/delete, and agent tool invocation must leave an audit event in the local audit SQLite database.

PAGE 1 of 4

This page continues the fictional NovaCure training material for 'intake mandatory fields triage status and HITL close gate'. Product names, lots, REF IDs, mailboxes, and operator names are invented for local demos of intake, triage, audit, hybrid RAG, and governed agent tooling.

Section 1.1 — Operators capture Product Quality Complaints and Suspected Adverse Events with synthetic IDs such as REF-2026-000101 and LOT-80101. Demo products include NeuroCalm 50mg, CardioSafe 10mg, AllergyClear 5mg, and PainAway Gel. Never store real patient names, phones, addresses, or medical record numbers.

Checklist 1.1: (A) report type PQC or AE; (B) lot matches LOT-#####; (C) date received present; (D) reporter type set; (E) factual description only — no treatment advice or causality language. Maya/Priya triage on the Dashboard; Sam approves HITL close. Illegal New→Closed transitions are rejected. Audit stores create, status_change, hitl_*, document_ingested, and agent tool events.

RAG note 1.1: For packaging questions on LOT-88392, ground on quarantine within 4 business hours and qc-desk@novacure.example (fictional). Prefer citing this SOP over invented clinical or regulatory conclusions. If retrieval is empty, return insufficient evidence.

Section 1.2 — Operators capture Product Quality Complaints and Suspected Adverse Events with synthetic IDs such as REF-2026-000102 and LOT-80102. Demo products include NeuroCalm 50mg, CardioSafe 10mg, AllergyClear 5mg, and PainAway Gel. Never store real patient names, phones, addresses, or medical record numbers.

Checklist 1.2: (A) report type PQC or AE; (B) lot matches LOT-#####; (C) date received present; (D) reporter type set; (E) factual description only — no treatment advice or causality language. Maya/Priya triage on the Dashboard; Sam approves HITL close. Illegal New→Closed transitions are rejected. Audit stores create,

status_change, hitl_*, document_ingested, and agent tool events.

RAG note 1.2: For packaging questions on LOT-88392, ground on quarantine within 4 business hours and qc-desk@novacure.example (fictional). Prefer citing this SOP over invented clinical or regulatory conclusions. If retrieval is empty, return insufficient evidence.

Page 1 summary: local SQLite only, synthetic data only, HITL for close, hybrid retrieval (BM25 + dense + RRF + rerank), no prohibited clinical decisions.

This page continues the fictional NovaCure training material for 'intake mandatory fields triage status and HITL close gate'. Product names, lots, REF IDs, mailboxes, and operator names are invented for local demos of intake, triage, audit, hybrid RAG, and governed agent tooling.

Section 2.1 — Operators capture Product Quality Complaints and Suspected Adverse Events with synthetic IDs such as REF-2026-000201 and LOT-80201. Demo products include NeuroCalm 50mg, CardioSafe 10mg, AllergyClear 5mg, and PainAway Gel. Never store real patient names, phones, addresses, or medical record numbers.

Checklist 2.1: (A) report type PQC or AE; (B) lot matches LOT-#####; (C) date received present; (D) reporter type set; (E) factual description only — no treatment advice or causality language. Maya/Priya triage on the Dashboard; Sam approves HITL close. Illegal New→Closed transitions are rejected. Audit stores create, status_change, hitl_*, document_ingested, and agent tool events.
